

ABSTRACT OF THE DISCLOSURE:

An image reading device and an image forming apparatus including the device, include: a multiple number of document trays; a control panel through which each of the multiple document trays can be designated to be used as a dedicated tray for a usage mode and which can provide the condition display corresponding to each of the usage modes; and a controller which, when a document or documents are placed on one of the dedicated trays, automatically presents on the control panel the condition display for the usage mode of the dedicated tray.
